In such an event, Landlord does not undertake any covenant to repair or restore the Premises to a habitable condition.

In the event that Tenant does create or cause any encumbrance against the title, it shall be cured within five days after demand by Landlord. Any encumbrance created by Tenant shall constitute a material breach of this Lease. Tenant shall be liable to Landlord for all costs and damages incurred by Landlord, including all legal fees incurred as a result of any breach of this provision, to the extent permitted by statute or local ordinance.

25. Legal Expenses. Tenant shall be liable for all legal fees and costs incurred by Landlord as a result of Landlord's efforts to enforce any provision of this Lease, to the extent permitted by court rules, statute or local ordinance.

26. Litigation Escrow. In the event that Tenant withholds rent in excess of that allowed by statutes or local ordinance, and Landlord institutes a lawsuit in Forcible Entry and Detainer to regain possession of the Premises, or in contract to enforce any provision of this Lease, Tenant shall place such excess rent with the Clerk of Circuit Court, pending disposition of the lawsuit.

27. Surrender of Possession. Tenant shall surrender possession of the Premises and return the keys to Landlord or Landlord's agent, immediately upon expiration of this Lease, or upon termination due to Tenant's breach. Surrender of possession shall also be deemed to have occurred if Tenant returns the keys to Landlord prior to the expiration of this Lease.

28. Subordination of Lease/Estoppel. This Lease is subordinate to all mortgages upon the property of which the Premises forms a part, either in place at the time of Lease execution, or which may be placed upon the property at any time during the term of this Lease. Tenant shall execute any estoppel letter required by any mortgage lender or purchaser of the property, relative to the affirmation of Tenant's Lease status.

29. Eminent Domain. If all or part of the Premises or the property of which the Premises forms a part is condemned, expropriated or otherwise regulated by any governmental authority in a manner which would prevent lawful occupancy, this Lease shall be terminated and Tenant shall not be entitled to any compensation.

30. Heirs and Assigns. All of the promises, covenants and agreements and conditions contained herein shall be binding upon and inure to the benefit of the heirs, executors, administrators, successors and assigns of Landlord and Tenant.

32. Time of the Essence. Time is of the essence for the payment of rent and the performance of each and every covenant, term, agreement and condition of this Lease, and Tenant shall be held in strict compliance with same.

Preventing BEDBUG Infestations in Apartments

Bed bugs can be found in homes, apartments, hotels, schools, dormitories, shelters, offices and other places. This brochure provides information on bed bugs and what you should do if you have or suspect you have a bed bug infestation in your apartment. It also describes your rights and responsibilities as a tenant.

Why is this brochure being provided to me?

In 2013, the City of Chicago passed an ordinance to help address the growing problem of bed bugs. This ordinance provides that landlords and tenants share the responsibility in preventing and controlling bed bug infestations. Further, the ordinance requires that landlords provide an informational brochure on bed bugs to tenants. This informational brochure, developed by the Chicago Department of Public Health, is intended to meet this requirement.

What are bed bugs?

Bed bugs are small, flat, wingless insects. They feed on blood and can be a nuisance for individuals. They are named for their tendency to live on mattresses or other parts of a bed.

What do bed bugs look like?

Adult bed bugs are roughly the size, shape and color of an apple seed: 1/4 of an inch in length and light or reddish-brown in color. Immature forms of bed bugs are smaller and lighter in color. Eggs are tiny and white. You should be able to see the adult form with your naked eye, but may need a magnifying glass to see the immature forms or eggs. Please refer to the website listed at the end of this brochure for pictures of bed bugs.

Where do bed bugs live?

Bed bugs can be found anywhere people sleep, sit or lay down. They can be found on mattresses and box springs, especially near the piping, seams and tags, and in cracks and crevices of head boards and bed frames. They can also be found in other furniture, especially in the seams and zippers of chairs and couches, in the folds of curtains, in drawer joints, in electrical outlets, behind picture frames and in other tight spaces.

How can bed bugs get into an apartment?

Bed bugs can get into an apartment by hitching a ride on mattresses or other bedding, furniture, clothing and baggage. Once in an apartment, they can crawl from one room to another, or get into an adjacent apartment by crawling through small cracks or holes in walls or ceilings or under doors. Because bed bugs do not have wings, they cannot fly into or around your apartment.

What can I do to prevent bed bugs from getting into my apartment?

Bed bugs can be found most anywhere, so ALWAYS be aware of your surroundings. Always check furniture and bedding, especially those bought secondhand, for signs of bed bugs before you buy them. NEVER bring items that someone else has disposed of into your apartment, as these items may be infested with bed bugs. When returning home from travel within or from outside the U.S., ALWAYS inspect your luggage carefully for signs of bed bugs before you bring the luggage into your apartment.

What else can I do to prevent a bed bug infestation?

Reduce clutter, especially in bedrooms. Store unused items in sealed containers or plastic bags. Wash and dry bedding often. Check beds and furniture for signs of bed bugs. Purchase mattress and box spring covers.

Do bed bugs transmit disease?

No, bed bugs are not known to transmit disease.

Are there other health concerns related to bed bugs?

Yes. Their bites, like those of other insects, may cause an allergic reaction with swelling, redness and itching. Their presence may cause people to be anxious and lose sleep.

How do I know if I have a bed bug infestation in my apartment?

Though bites may be an indicator of a bed bug infestation, they are generally a poor one as not all people will react to bed bug bites or the bites may be due to other reasons. The best indication of an infestation is to look for physical signs of bed bugs such as live or dead bed bugs, eggs or eggshells or tiny dark spots or reddish stains on mattresses or other places where bed bugs live.

What should I do if I suspect there are bed bugs in my apartment?

Under this ordinance, tenants MUST call their landlord immediately then follow-up in writing. Tenants SHOULD NOT try to get rid of the bed bugs by applying chemicals, "bug bombs" or pesticides as these do not work and could make you, your family or neighbors sick. Once a tenant has notified the landlord, wait for additional instructions from the landlord and pest management professional. Prompt notification and treatment will help prevent the further spread of bed bugs.

Should I dispose of bedding, clothing or other materials that may be infested?

Disposing of these items is probably not necessary unless directed by a pest management professional. If there are items that do need to be disposed of, do so carefully by sealing them in plastic bags so as to not spread bed bugs further. The ordinance prohibits the recycling of any bed bug infested materials and requires that any bed bug infested materials be totally enclosed in a plastic bag and labeled as being infested with bed bugs when disposed.

What should I do with any linens or clothes that may be infested?

- Wash all linen and other infested materials (including clothing) in hot water, then after drying the clothes, keep them in the dryer and dry for an additional 20 minutes on the highest setting.
- Put un-washable or "dry clean only" materials in the dryer on the highest setting for at least 20 minutes.
- If you have to launder in a common area of the building or at a laundromat, make sure all items are enclosed in a bag before leaving your apartment to prevent the further spread of bed bugs.
- Once all these materials are laundered and dried, seal them in clean bags so bed bugs can't re-infest them.

What are my responsibilities as a tenant under this ordinance?

Tenants have two main responsibilities under this ordinance:

- 1) Notify your landlord within 5 days of suspecting a bed bug infestation;
- 2) Cooperate with the landlord by adhering to the following:

- Don't interfere with an inspection or with a treatment.
- Grant access to your apartment for an inspection or a treatment.
- Make the necessary preparations, as instructed by your landlord or a pest management professional, prior to an inspection or a treatment.
- Dispose of any items that a pest management professional has determined can not be treated or cleaned.
- Enclose in a plastic bag any personal property that will be moved through any common area of the building, or stored in any other location.

Are there any exemptions to these tenant responsibilities?

Yes. The ordinance exempts tenants who live in an assisted living or shared housing establishment, or similar living arrangement, where the establishment is required to provide the tenant assistance with activities of daily living or mandatory services. In such cases, the landlord is responsible for making the necessary preparations and removing or disposing of any personal property.

What penalties can a tenant face for not complying with these requirements?

The ordinance allows the city to issue fines to tenants for not complying with these requirements. Fines can go as high as \$2,000 for a third offense. Landlords can not fine tenants.

What are my rights as a tenant under this ordinance?

Landlords can't retaliate against a tenant if the tenant:

- Complains of a bed bug infestation to a governmental agency elected representative or public official charged with responsibility for enforcement of a building, housing, health or similar code.
- Complains of a bed bug infestation to a community organization or to the news-media.
- Seeks the assistance of a community organization or the news-media to remedy a bed bug infestation.
- Asks the landlord to provide pest control measures.
- Testifies in court concerning any bed bug infestation.

What are my landlord's responsibilities under this ordinance?

Landlords have three main responsibilities under this ordinance:

- 1) Educate tenants about bed bugs by providing this brochure when tenants sign a new or renew an existing lease or other rental agreement.

- 2) Notify tenants prior to any inspection or treatment of their apartment for bed bugs and provide instructions for preparing the apartment.

- 3) Get rid of the bed bug infestation by providing pest control services by a pest management professional and paying for this service.

How much time does a landlord have to provide a pest management professional?

The ordinance allows landlords up to 10 days to have a pest management professional come to inspect your apartment.

Does the ordinance require any specific type of inspection or treatment?

If bed bugs are in an apartment, there is a chance they may be found in additional apartments in that same building, especially those closest to the apartment with the bed bugs. As a result, the apartments on either side and directly above and below the apartment with the bed bugs need to be inspected and if necessary, treated. Treatment will only occur if bed bugs are found.

Do these requirements apply to condominiums or cooperative building?

Yes, but only to units that are being rented.

What penalties can a landlord face for not complying with these requirements?

The ordinance allows the city to issue fines to landlords for not complying with these requirements. Fines can go as high as \$2,000 for a third offense.

What should I do if my landlord is not responsive?

If you suspect there are bed bugs in your apartment, call your landlord immediately and follow-up in writing. Give your landlord up to 10 days to have a pest management professional come to inspect your apartment. If your landlord is not responsive, call 311 and file a complaint.

- Sellers must disclose known information on lead-based paint or lead-based paint hazards before selling a house.
- Real estate sales contracts must include a specific warning statement about lead-based paint. Buyers have up to 10 days to check for lead.
- Landlords must disclose known information on lead-based paint and lead-based paint hazards before leases take effect. Leases must include a specific warning statement about lead-based paint.

If undertaking renovations, repairs, or painting (RRP) projects in your pre-1978 home or apartment:

- Read EPA's pamphlet, *The Lead-Safe Certified Guide to Renovate Right*, to learn about the lead-safe work practices that contractors are required to follow when working in your home (see page 12).

Simple Steps to Protect Your Family from Lead Hazards

If you think your home has lead-based paint:

- Don't try to remove lead-based paint yourself.
- Always keep painted surfaces in good condition to minimize deterioration.
- Get your home checked for lead hazards. Find a certified inspector or risk assessor at epa.gov/lead.
- Talk to your landlord about fixing surfaces with peeling or chipping paint.
- Regularly clean floors, window sills, and other surfaces.
- Take precautions to avoid exposure to lead dust when remodeling.
- When renovating, repairing, or painting, hire only EPA- or state-approved Lead-Safe certified renovation firms.
- Before buying, renting, or renovating your home, have it checked for lead-based paint.
- Consult your health care provider about testing your children for lead. Your pediatrician can check for lead with a simple blood test.
- Wash children's hands, bottles, pacifiers, and toys often.
- Make sure children avoid fatty (or high fat) foods and eat nutritious meals high in iron and calcium.
- Remove shoes or wipe soil off shoes before entering your house.

Lead Gets into the Body in Many Ways

Adults and children can get lead into their bodies if they:

- Breathe in lead dust (especially during activities such as renovations, repairs, or painting that disturb painted surfaces).
- Swallow lead dust that has settled on food, food preparation surfaces, and other places.
- Eat paint chips or soil that contains lead.

Lead is especially dangerous to children under the age of 6.

- At this age, children's brains and nervous systems are more sensitive to the damaging effects of lead.
- Children's growing bodies absorb more lead.
- Babies and young children often put their hands and other objects in their mouths. These objects can have lead dust on them.

Women of childbearing age should know that lead is dangerous to a developing fetus.

- Women with a high lead level in their system before or during pregnancy risk exposing the fetus to lead through the placenta during fetal development.

Health Effects of Lead

Lead affects the body in many ways. It is important to know that even exposure to low levels of lead can severely harm children.

In children, exposure to lead can cause:

- Nervous system and kidney damage
- Learning disabilities, attention deficit disorder, and decreased intelligence
- Speech, language, and behavior problems
- Poor muscle coordination
- Decreased muscle and bone growth
- Hearing damage

While low-lead exposure is most common, exposure to high amounts of lead can have devastating effects on children, including seizures, unconsciousness, and, in some cases, death.

Although children are especially susceptible to lead exposure, lead can be dangerous for adults, too.

In adults, exposure to lead can cause:

- Harm to a developing fetus
- Increased chance of high blood pressure during pregnancy
- Fertility problems (in men and women)
- High blood pressure
- Digestive problems
- Nerve disorders
- Memory and concentration problems

Check Your Family for Lead

Get your children and home tested if you think your home has lead.

Children's blood lead levels tend to increase rapidly from 6 to 12 months of age, and tend to peak at 18 to 24 months of age.

Consult your doctor for advice on testing your children. A simple blood test can detect lead. Blood lead tests are usually recommended for:

- Children at ages 1 and 2
- Children or other family members who have been exposed to high levels of lead
- Children who should be tested under your state or local health screening plan

Your doctor can explain what the test results mean and if more testing will be needed.

Where Lead-Based Paint Is Found

In general, the older your home or childcare facility, the more likely it has lead-based paint.¹

Many homes, including private, federally-assisted, federally-owned housing, and childcare facilities built before 1978 have lead-based paint. In 1978, the federal government banned consumer uses of lead-containing paint.²

Learn how to determine if paint is lead-based paint on page 7.

Lead can be found:

- In homes and childcare facilities in the city, country, or suburbs,
- In private and public single-family homes and apartments,
- On surfaces inside and outside of the house, and
- In soil around a home. (Soil can pick up lead from exterior paint or other sources, such as past use of leaded gas in cars.)

Learn more about where lead is found at epa.gov/lead.

¹ "Lead-based paint" is currently defined by the federal government as paint with lead levels greater than or equal to 1.0 milligram per square centimeter (mg/cm), or more than 0.5% by weight.

² "Lead-containing paint" is currently defined by the federal government as lead in new

Identifying Lead-Based Paint and Lead-Based Paint Hazards

Deteriorating lead-based paint (peeling, chipping, chalking, cracking, or damaged paint) is a hazard and needs immediate attention. **Lead-based paint** may also be a hazard when found on surfaces that children can chew or that get a lot of wear and tear, such as:

- On windows and window sills
- Doors and door frames
- Stairs, railings, banisters, and porches

Lead-based paint is usually not a hazard if it is in good condition and if it is not on an impact or friction surface like a window.

Lead dust can form when lead-based paint is scraped, sanded, or heated. Lead dust also forms when painted surfaces containing lead bump or rub together. Lead paint chips and dust can get on surfaces and objects that people touch. Settled lead dust can reenter the air when the home is vacuumed or swept, or when people walk through it. EPA currently defines the following levels of lead in dust as hazardous:

- 40 micrograms per square foot ($\mu\text{g}/\text{ft}^2$) and higher for floors, including carpeted floors
- 250 $\mu\text{g}/\text{ft}^2$ and higher for interior window sills

Lead in soil can be a hazard when children play in bare soil or when people bring soil into the house on their shoes. EPA currently defines the following levels of lead in soil as hazardous:

- 400 parts per million (ppm) and higher in play areas of bare soil
- 1,200 ppm (average) and higher in bare soil in the remainder of the yard

Remember, lead from paint chips—which you can see—and lead dust—which you may not be able to see—both can be hazards.

Checking Your Home for Lead

You can get your home tested for lead in several different ways:

- A lead-based paint **inspection** tells you if your home has lead-based paint and where it is located. It won't tell you whether your home currently has lead hazards. A trained and certified testing professional, called a lead-based paint inspector, will conduct a paint inspection using methods, such as:
 - Portable x-ray fluorescence (XRF) machine
 - Lab tests of paint samples
- A **risk assessment** tells you if your home currently has any lead hazards from lead in paint, dust, or soil. It also tells you what actions to take to address any hazards. A trained and certified testing professional, called a risk assessor, will:
 - Sample paint that is deteriorated on doors, windows, floors, stairs, and walls
 - Sample dust near painted surfaces and sample bare soil in the yard
 - Get lab tests of paint, dust, and soil samples
- A combination inspection and risk assessment tells you if your home has any lead-based paint and if your home has any lead hazards, and where both are located.

Be sure to read the report provided to you after your inspection or risk assessment is completed, and ask questions about anything you do not understand.

Checking Your Home for Lead, continued

In preparing for renovation, repair, or painting work in a pre-1978 home, Lead-Safe Certified renovators (see page 12) may:

- Take paint chip samples to determine if lead-based paint is present in the area planned for renovation and send them to an EPA-recognized lead lab for analysis. In housing receiving federal assistance, the person collecting these samples must be a certified lead-based paint inspector or risk assessor
- Use EPA-recognized tests kits to determine if lead-based paint is absent (but not in housing receiving federal assistance)
- Presume that lead-based paint is present and use lead-safe work practices

There are state and federal programs in place to ensure that testing is done safely, reliably, and effectively. Contact your state or local agency for more information, visit epa.gov/lead, or call **1-800-424-LEAD (5323)** for a list of contacts in your area.³

What You Can Do Now to Protect Your Family

If you suspect that your house has lead-based paint hazards, you can take some immediate steps to reduce your family's risk:

- If you rent, notify your landlord of peeling or chipping paint.
- Keep painted surfaces clean and free of dust. Clean floors, window frames, window sills, and other surfaces weekly. Use a mop or sponge with warm water and a general all-purpose cleaner. (Remember: never mix ammonia and bleach products together because they can form a dangerous gas.)
- Carefully clean up paint chips immediately without creating dust.
- Thoroughly rinse sponges and mop heads often during cleaning of dirty or dusty areas, and again afterward.
- Wash your hands and your children's hands often, especially before they eat and before nap time and bed time.
- Keep play areas clean. Wash bottles, pacifiers, toys, and stuffed animals regularly.
- Keep children from chewing window sills or other painted surfaces, or eating soil.
- When renovating, repairing, or painting, hire only EPA- or state-approved Lead-Safe Certified renovation firms (see page 12).
- Clean or remove shoes before entering your home to avoid tracking in lead from soil.
- Make sure children avoid fatty (or high fat) foods and eat nutritious meals high in iron and calcium. Children with good diets absorb less lead.

Reducing Lead Hazards

Disturbing lead-based paint or removing lead improperly can increase the hazard to your family by spreading even more lead dust around the house.

- In addition to day-to-day cleaning and good nutrition, you can **temporarily** reduce lead-based paint hazards by taking actions, such as repairing damaged painted surfaces and planting grass to cover lead-contaminated soil. These actions are not permanent solutions and will need ongoing attention.
- You can minimize exposure to lead when renovating, repairing, or painting by hiring an EPA- or state-certified renovator who is trained in the use of lead-safe work practices. If you are a do-it-yourselfer, learn how to use lead-safe work practices in your home.
- To remove lead hazards permanently, you should hire a certified lead abatement contractor. Abatement (or permanent hazard elimination) methods include removing, sealing, or enclosing lead-based paint with special materials. Just painting over the hazard with regular paint is not permanent control.

Always use a certified contractor who is trained to address lead hazards safely.

- Hire a Lead-Safe Certified firm (see page 12) to perform renovation, repair, or painting (RRP) projects that disturb painted surfaces.
- To correct lead hazards permanently, hire a certified lead abatement professional. This will ensure your contractor knows how to work safely and has the proper equipment to clean up thoroughly.

Certified contractors will employ qualified workers and follow strict safety rules as set by their state or by the federal government.

Reducing Lead Hazards, continued

If your home has had lead abatement work done or if the housing is receiving federal assistance, once the work is completed, dust cleanup activities must be conducted until clearance testing indicates that lead dust levels are below the following levels:

- 40 micrograms per square foot ($\mu\text{g}/\text{ft}^2$) for floors, including carpeted floors
- 250 $\mu\text{g}/\text{ft}^2$ for interior windows sills
- 400 $\mu\text{g}/\text{ft}^2$ for window troughs

For help in locating certified lead abatement professionals in your area, call your state or local agency (see pages 14 and 15), or visit epa.gov/lead, or call 1-800-424-LEAD.

Renovating, Remodeling, or Repairing (RRP) a Home with Lead-Based Paint

If you hire a contractor to conduct renovation, repair, or painting (RRP) projects in your pre-1978 home or childcare facility (such as pre-school and kindergarten), your contractor must:

- Be a Lead-Safe Certified firm approved by EPA or an EPA-authorized state program
- Use qualified trained individuals (Lead-Safe Certified renovators) who follow specific lead-safe work practices to prevent lead contamination
- Provide a copy of EPA's lead hazard information document, *The Lead-Safe Certified Guide to Renovate Right*

RRP contractors working in pre-1978 homes and childcare facilities must follow lead-safe work practices that:

- **Contain the work area.** The area must be contained so that dust and debris do not escape from the work area. Warning signs must be put up, and plastic or other impermeable material and tape must be used.
- **Avoid renovation methods that generate large amounts of lead-contaminated dust.** Some methods generate so much lead-contaminated dust that their use is prohibited. They are:
 - Open-flame burning or torching
 - Sanding, grinding, planing, needle gunning, or blasting with power tools and equipment not equipped with a shroud and HEPA vacuum attachment and
 - Using a heat gun at temperatures greater than 1100°F
- **Clean up thoroughly.** The work area should be cleaned up daily. When all the work is done, the area must be cleaned up using special cleaning methods.
- **Dispose of waste properly.** Collect and seal waste in a heavy duty bag or sheeting. When transported, ensure that waste is contained to prevent release of dust and debris.

Other Sources of Lead

While paint, dust, and soil are the most common sources of lead, other lead sources also exist:

- **Drinking water.** Your home might have plumbing with lead or lead solder. You cannot see, smell, or taste lead, and boiling your water will not get rid of lead. If you think your plumbing might contain lead:
 - Use only cold water for drinking and cooking.
 - Run water for 15 to 30 seconds before drinking it, especially if you have not used your water for a few hours.

Call your local health department or water supplier to find out about testing your water, or visit epa.gov/lead for EPA's lead in drinking water information.

- **Lead smelters** or other industries that release lead into the air.
- **Your job.** If you work with lead, you could bring it home on your body or clothes. Shower and change clothes before coming home. Launder your work clothes separately from the rest of your family's clothes.
- **Hobbies** that use lead, such as making pottery or stained glass, or refinishing furniture. Call your local health department for information about hobbies that may use lead.
- Old **toys** and **furniture** may have been painted with lead-containing paint. Older toys and other children's products may have parts that contain lead.⁴
- Food and liquids cooked or stored in **lead crystal** or **lead-glazed pottery** or **porcelain** may contain lead.
- Folk remedies, such as "**greta**" and "**azarcon**," used to treat an upset stomach.

⁴ In 1978, the federal government banned toys, other children's products, and furniture with lead-containing paint (16 CFR 1303). In 2008, the federal government banned lead in most children's products. The federal government currently bans lead in

Lead From Paint, Dust, and Soil in and Around Your Home Can Be Dangerous if Not Managed Properly

- Children under 6 years old are most at risk for lead poisoning in your home.
- Lead exposure can harm young children and babies even before they are born.
- Homes, schools, and child care facilities built before 1978 are likely to contain lead-based paint.
- Even children who seem healthy may have dangerous levels of lead in their bodies.
- Disturbing surfaces with lead-based paint or removing lead-based paint improperly can increase the danger to your family.
- People can get lead into their bodies by breathing or swallowing lead dust, or by eating soil or paint chips containing lead.
- People have many options for reducing lead hazards. Generally, lead-based paint that is in good condition is not a hazard (see page 10).

Radon Testing Guidelines for Real Estate Transactions

Because of the unique nature of real estate transactions, involving multiple parties and financial interests, the U.S. Environmental Protection Agency (U.S. EPA) designed special protocols for radon testing in real estate transactions. The Illinois Emergency Management Agency (IEMA) Division of Nuclear Safety has adapted these protocols to conform with its radon regulations. These options are listed in simplified form in the table below.

Recommendations for Real Estate Transactions

IEMA strongly recommends ALL homebuyers have an indoor radon test performed prior to purchase or taking occupancy, and mitigated if elevated levels are found. It is not in the best interest of the buyer or seller to rely on a radon measurement performed by anyone other than a licensed measurement professional or technician. Elevated radon concentrations can easily be reduced by a qualified, licensed radon mitigator.

Test Options for Real Estate Transactions

Conduct a short-term radon test in each of the lowest structural areas of the home. For example, if the house has one or more of the following foundation types, e.g., basement, crawl space, slab-on-grade, a test in each area is required for licensed professional measurements.

Option	Detector Location	What to do Next
Simultaneous Two short-term tests, 48 hours or longer, performed at the same time.	Two detectors, four inches apart, in each of the lowest structural areas suitable for occupancy.	Fix the home if the average of the two tests is 4 pCi/L or more.
Continuous Monitor Test One test, 48 hours or longer, performed with an active continuous monitor that integrates and records radon levels hourly.	Continuous monitor placed in each of the lowest structural areas suitable for occupancy.	Fix the home if the average radon level is 4 pCi/L or more.

Short-term tests may last between two and 90 days. Most last between two and seven days. Tests between seven and 90 days are usually impractical for real estate transactions. Examples of short-term detectors used in real estate testing include: activated charcoal canisters, charcoal liquid scintillation vials, electret chambers and continuous radon monitors.

If your tests don't agree, contact the IEMA-Division of Nuclear Safety

If your simultaneous or sequential tests are not in agreement (or if you're not sure whether or not they agree), contact the IEMA-Division of Nuclear Safety Radon Program or your licensed radon measurement professional.

When do you average radon test results?

The only time radon test results can be averaged is when two test results are placed simultaneously. Test results from different areas, such as above the crawl space and in the basement, are considered two different tests. Results are each independent of the other and are reported independently, such as basement result of 4.2 pCi/L and family room over crawl space result of 6.1 pCi/L. With an elevated radon level in any one of the lowest structural areas, the recommendation is to fix the house.

Interference with successful completion of a radon measurement is illegal in Illinois.

- Hire a licensed radon measurement professional.

Disclosure of Radon Information

The Illinois Radon Awareness Act and the Illinois Real Property Disclosure Act requires that a seller of a home disclose information if aware of unsafe concentrations of radon in the home. The acts do not require that testing or remediation work be conducted. However, many relocation companies and lending institutions, as well as home buyers, request a radon test when purchasing a house. Sellers and brokers are cautioned to err on the side of full disclosure of material facts prior to entering into a purchase agreement.

When Testing

Be aware that any test lasting less than a week requires closed-house conditions. Closed-house conditions mean keeping all windows closed, keeping doors closed except for normal entry and exit, and not operating fans or other machines which bring air in from outside (except for fans that are part of a radon reduction system, or small exhaust fans that operate for only short periods of time).

- Before Testing: Begin closed-house conditions at least 12 hours before the start of the short-term test.
- During Testing: Maintain closed-house conditions during the entire duration of the short-term test, especially for tests less than one week in duration. Operate home heating or cooling systems normally during the test. For tests lasting less than one week, only operate air conditioning units that recirculate interior air.

Note that professional measurement licensees are required to post Radon Measurement in Progress Notifications at every building entry.

Where the test should be conducted

Place the detector or detectors in each lowest area suitable for occupancy, such as:

- a family room, living room, den, playroom, bedroom, workshop, or exercise room;
 - in the lowest level suitable for occupancy, even if it isn't currently used but could be, without renovating.
- For instance, if the house has one or more of the following foundation types, e.g., basement, crawl space, slab-on-grade, a test should be performed in the basement and in at least one room over the crawl space and slab-on-grade area. If an elevated radon concentration is found and confirmed in one of these areas, fix the house.

DO NOT MEASURE:

- in the kitchen, laundry room and bathroom (because fan systems and humidity may affect some detectors); or
- in crawl spaces, on floor or wall cracks, or right next to a sump pump, as this may cause a false high reading.

The detector should be placed:

- in an area where it will not be disturbed;
- at least three feet from doors and windows to the outside;
- at least one foot from exterior walls;
- 20 inches to 6 feet from the floor;
- at least four inches away from other objects horizontally and directly above the detector;
- away from drafts; and
- four feet from heat, fireplaces, furnaces, and away from direct sunlight and areas of high humidity.

If the test results show radon levels above 4 pCi/L

Contact the IEMA-Division of Nuclear Safety Radon Program. Staff can provide names and addresses of professional radon mitigators who are trained to reduce radon concentrations. We also recommend that you see our web site www.radon.illinois.gov or contact the Radon Program for a copy of our brochure, *IEMA-Division of Nuclear Safety Guide to Radon Mitigation*.

After a radon reduction system is installed

Perform an independent short-term test to ensure that the reduction system is effective. Make sure the system is operating during the entire test.

The IEMA-Division of Nuclear Safety Radon Program can provide:

- Information about radon and radon testing;
- Names of licensed radon measurement professionals;
- Names of licensed radon mitigation professionals trained to reduce radon.
